

# VizPro® Process Architecture Methodology

## Process Architecture & VizPro®

Business Process Architecture includes the following:

- 🕒 understanding (analysis)
- 🕒 developing
- 🕒 modeling
- 🕒 documenting
- 🕒 improving business processes

VizPro® - our process analysis and documentation methodology is a structured and interactive approach to Business Process Architecture.

## Colourful and content-rich

The VizPro® maps and graphics are easy to understand and interpret and it shows users:

- 🕒 the purpose and scope of each process
- 🕒 the process steps
- 🕒 the input and output to each step
- 🕒 the role players
- 🕒 how steps are performed
- 🕒 when activities take place
- 🕒 interfacing processes, systems and where they are located
- 🕒 risks, controls, checks, KPIs, MI, QM and change management elements and where they are located.

## Interactive process development

VizPro® moves away from brown paper drawing, using Microsoft Visio as a preferred tool to draw content-rich and colourful images during work sessions. This creates a lively environment where participants are invited to contribute to challenge, debate, and improve the process. The graphics, colour and information provide instant understanding around the the process. The graphics are catalyzing the work sessions.

The Assistant Process Architect draws the pictures during the work session, while the Process Architect is engaging with workshop participants. The Architect translates the input from the participants into the graphics projected.

The interactive, user-friendly and the graphical format of VizPro® continues to 'wow!' the business and IT community.

## VizPro® for IT implementation

VizPro® starts from the 'Big Picture' using a holistic view to understand business and its processes.

Organisations often invest large sums of money in IT projects, only to find that the requirements have been misunderstood, that the system is designed to reflect poor or outdated business practice, or that the system is poorly used by the business after implementation. The result is loss of promised benefits. VizPro® ensures that systems requirements are understood in a business context upfront – it aligns how the business will use the system and/or information.

It is a communication tool to tell the wider business community how the new system will be used. Once the system is developed, the same processes are used during implementation and training phases.

It assists with the business change management plan, through the collaborative nature of the work sessions.

## Why clients work with us

VizPro® ensures most or all of the following benefits depending on the focus of the project:

- 🕒 cost savings which result from improved process efficiencies
- 🕒 understanding the 'big picture', how one process impacts another
- 🕒 understanding of systems requirements in the context of business use
- 🕒 realising the benefits of IT projects through interactive change management
- 🕒 improved controls, risk management & compliance
- 🕒 early identification of training needs
- 🕒 noticeable and measurable skills improvement
- 🕒 knowledge sharing across the organisation
- 🕒 role clarification
- 🕒 easy access to accurate and common process information by all staff
- 🕒 an enlightened, motivated task force.
